Problem

In one of the world's largest manufacturers and suppliers of over 350 formulations and 80 APIs, there was no tracking of material supply and management.

Diagnosis

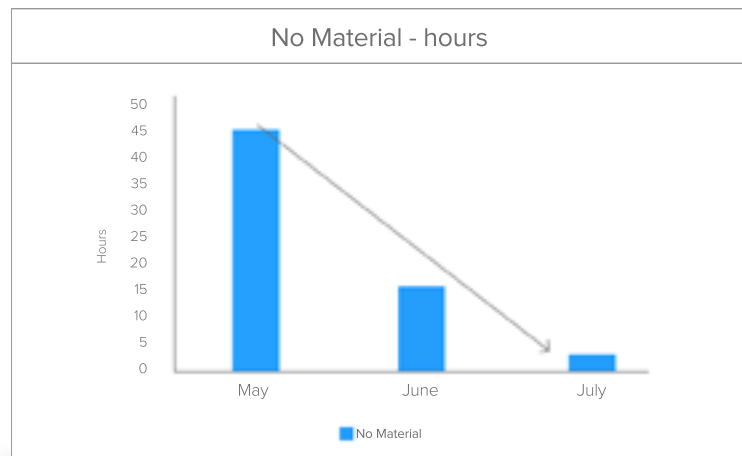

After implementation of IPF, It was established that one of the major reasons for the total stoppage of the FBP m/c was 'no material' that means the raw material were not fed into the FBP m/c at the desired time.

Action

Such a delay merely did not affect a single process but had a impact on the overall production flow of all the machines.

Impact

IPF helped production team visualize this delay and ultimately the delay was brought down by 93% in 3 months which resulted in saving revenue of INR. 3,35,343.
